Chunk-to-Graph: each stage adds one function and gives one variant, B to F
Document chunks
B
Structured base build
+ triples, SKOS hierarchy, entity typing
C
Incremental weighted build
+ domain and range of every property
D
Upstream refinement
+ extraction defects removed
E
Standards alignment, PROV-O provenance
+ standard properties, provenance links
F
SHACL validation
+ validation pass
Graph and ontology
A Naive direct-LLM baseline: chunks to graph in one step, no stages
